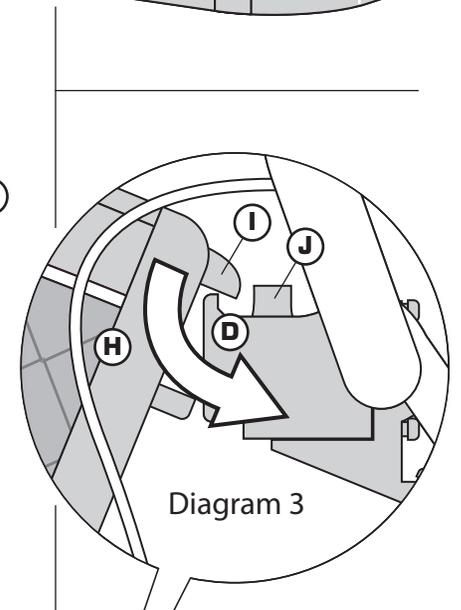

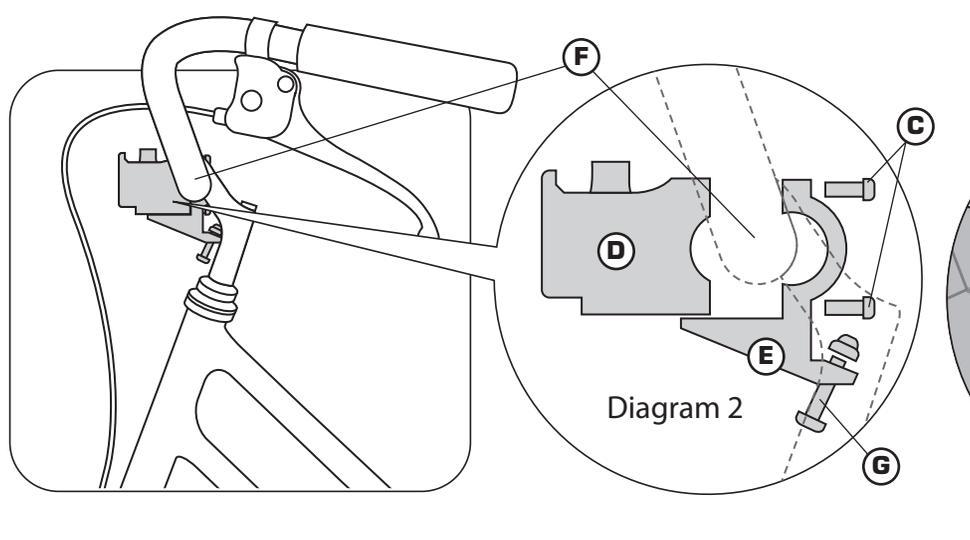

**Diagram 1:** Inserting the plastic supports into the basket:  
*This allows the basket to remain upright if placed on the ground.*

- 1) Insert the plastic support bars (A) into each slot (B) at either side of the interior of the basket.

**Diagram 2:** Attaching the basket mounting bracket to your bike:

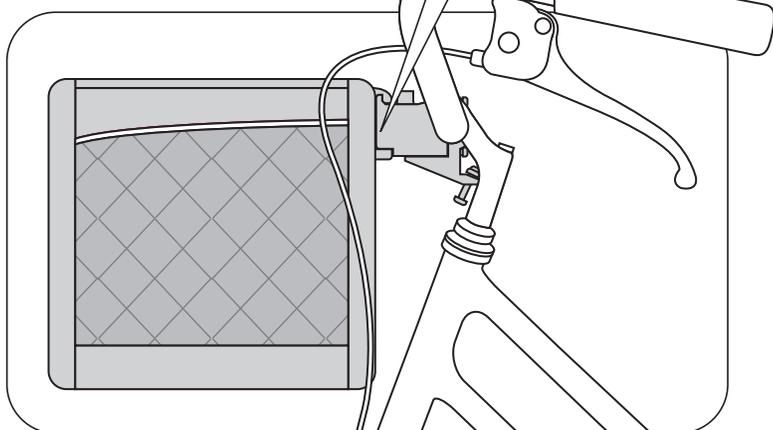

- 1) Remove 4 small bolts (C) so you have two separate (D) and (E) pieces.
- 2) Place part (E) under handlebar stem (F) of your bike with bolt (G) facing up towards the bottom of handlebar stem (F).
- 3) With green switch facing up clamp parts D and E around the handlebar stem (F). Part E should slide under part D. Squeeze together.
- 4) Screw bolts (C) in (alternate between them to tighten evenly) so (D) and (E) are completely secured around the handlebar stem (F).
- 5) Tighten bolt (G) to fit snug against handlebar stem (F)

**Diagram 3:** Putting basket on bike:  
**Make sure green button (J) is in the OFF position**

- 1) Tip the front end of the basket (H) upright.
- 2) Place hook (I) on top of part (D), then move basket down out of the tilted position until it is resting on part (D) by itself.
- 3) Click over the green button (J) to ON position to secure basket in place.

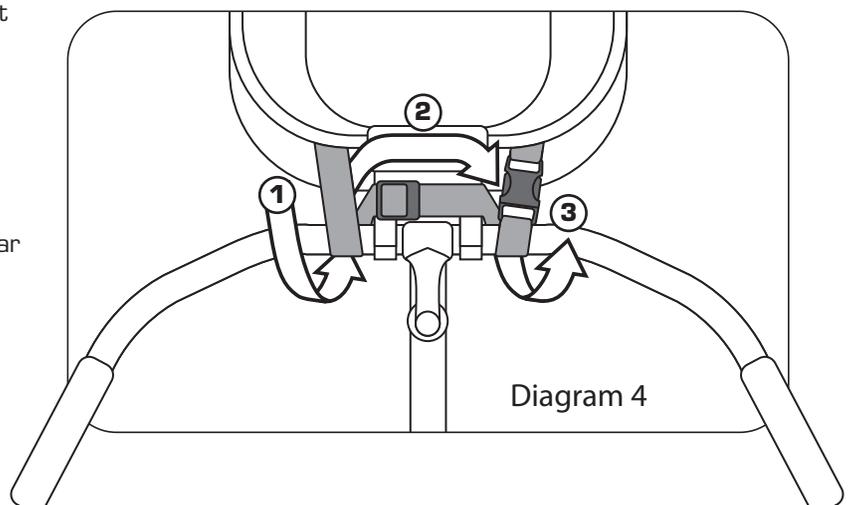

Repeat steps in reverse order to remove.

**Diagram 4:** (Optional) Finish securing the basket using the handle strap on the side of the basket closest to your bike's handles.

- 1) Unclip the handle strap from the basket.
- 2) Loop the strap over the left side handlebar, backup through and across the top of the bracket.
- 3) Bring the strap under the right side handlebar and then around the top to clip it back in.
- 4) Adjust strap so that it is pulled tightly around the handlebars.

This provides additional security and stability and should be done every time the basket is used.
